# Classic Escalators

## The Classic Escalator

Classic Escalators have been developed with safety and performance in mind. Its aesthetic features such as attractive balustrade designs and slimline handrail profile exudes grace and elegance while its sturdy construction provides strength and reliability. The Classic Escalator is an efficient people moving system that offers high performance and reliability. The microprocessor-controlled helical-gear drive system incorporates the latest available technology for maximum efficiency and low power consumption. An added flexibility is that Classic Escalators are easy to install and require minimal building space. Classic Escalators have installed in numerous facilities such as supermarkets and shopping centres worldwide.

## The Classic Escalators (Internationally Acclaimed)

As a testament to its quality, the classic Escalator was accorded the type-examination certificate by the well known certification body, TÜV Bau-und Betriebstechnik GmbH. This certificate certified that the Classic Escalator fulfils the essential safety requirements of the directive and regulations of the European DIN EN 115 (June 1995 edition). The Classic - safe, reliable, cost effective and now, internationally acclaimed.

## Wide Range Of Products

To cater to the every need of the customer, the company has a wide range of models, which include:

- FEC Type - Commercial Escalators
- FES Type - Slimline Escalators
- FEM Type - Multi-level Escalators
- FEH Type - Heavy Duty Escalators
- FET Type - Passenger Conveyors (Horizontal/Single Curve)
- FEF Type - Passenger Conveyors (Double Curve)

With the expertise, state-of-the technology and wide range of products, the company is in position to respond to all our customers' needs.

## Brief Description of Main Equipment

Classic Escalators have been designed to serve people of all ages and abilities. It is with this in mind that numerous safety features and sturdy equipment have been inherently incorporated into the Classic Escalators. In fact, research has shown that Escalators are generally safer than stairs and the Classic Escalator epitomises the very essence of this fact. A brief description of the safety features and main equipment of the Classic Escalator are as follows:

### Drive Unit

The drive unit is a high quality helical-gear motor that has been specially designed for the Classic Escalator. Imported from Germany, its efficient, smooth and quiet operation out-classes the traditional transmission drives.

### Truss

The truss is fabricated from rectangular steel tubes which provides added strength when compared to steel angles. The stronger construction is an essential enhancement in terms of safety and also results in lower risk of deformation through continued usage.
